

SV-01 Information Display and Automatic Sanitiser Station

A state of the art visual communication tool that has been optimised to provide the very latest information along with an effective hand sanitiser.

PLUG AND PLAY

Your SV-01 will arrive ready to go. Simply unpack, place in position, fill the sanitiser bottle with the sanitiser provided and plug into a standard mains power socket. Your SV-01 will start automatically.

INFORMATION DISPLAY

The SV-01 is equipped with an on-board content player that provides up to date safety and information messages sourced directly from Public Health England. As official advice changes the on-screen messages change. Personalised information such as Company Announcements, videos and advertising can also be played.

DUAL HAND SANITISER

Included in the SV-01 are 2 Automatic Hand Sanitiser Dispensers. Place your hands into the Dispenser and the SV-01 provides a measured quantity of Hand Sanitiser fluid. Our Hand Sanitiser fluid is made in the UK to the highest standards.

FACIAL RECOGNITION

An optional Facial Recognition System can be incorporated into the SV-01. The system recognises individuals and checks body temperature and if the individual is wearing a mask. A green pass light is displayed if the checks have been passed, a red light is displayed if there is an issue.

AREA TRAFFIC CONTROL

An optional Area Traffic Control System can be incorporated into the SV-01. The number of people in any area adjacent to the SV-01 can be monitored. If the maximum number of people allowed in the area is exceeded a “traffic light” system on the SV-01 is triggered warning people not to enter the area.

TECHNICAL SPECIFICATION

MODEL NAME	SV-01
DIMENSIONS	H1800MM X W848MM X D398MM
HAND SANITISER	5.0L CAPACITY (1000 DISPENSES)
FACIAL RECOGNITION (OPTIONAL)	INDIVIDUAL FACE AND MASK RECOGNITION. PERSONAL TEMPERATURE MEASUREMENT
WEIGHT	80KG
